

CONTENTS

CHAPTER 1	1
The Eureka Mine – an example of how to identify and solve problems in a flotation plant <i>Christopher Greet</i>	
Appendix 1 – The down-the-bank survey	43
Appendix 2 – Estimated mineral assays from elemental data	49
CHAPTER 2	55
Existing methods for process analysis <i>Bill Johnson</i>	
Appendix – Two aspects of sampling	99
CHAPTER 3	105
Mass balancing flotation data <i>Rob Morrison</i>	
CHAPTER 4	137
A practical guide to some aspects of mineralogy that affect flotation <i>Alan R Butcher</i>	
CHAPTER 5	157
Some troublesome sulfide and non-sulfide minerals <i>Bill Johnson and Peter Munro</i>	
CHAPTER 6	171
Characterisation measurements in industrial flotation cells <i>Greg Harbort, Sarah Schwarz and Thu Nguyen</i>	
CHAPTER 7	199
Chemical measurements during plant surveys and their interpretation <i>Stephen Grano</i>	
CHAPTER 8	227
Electrochemical aspects of sulfide mineral flotation <i>Ronald Woods OAM</i>	
Appendix – General description of the oxidation of sulfides and the consequences for the flotation process <i>Bill Johnson and Peter Munro</i>	256

CHAPTER 9	263
Surface chemical characterisation for flotation plant optimisation <i>Alan Buckley</i>	
Appendix – Practical examples of using surface chemistry to identify problems in flotation plants <i>Christopher Greet</i>	294
CHAPTER 10	321
Laboratory flotation testing – an essential tool for ore characterisation <i>Kym Runge</i>	
Appendix – Worked examples	343
CHAPTER 11	361
Designing and analysing plant trials <i>Tim Napier-Munn</i>	
CHAPTER 12	391
Project evaluation and communication <i>Joe Pease</i>	
CHAPTER 13	407
Operational geometallurgy <i>Dean David</i>
